

Brood XIX Cicadas 2024

Every 13 years, during the spring, the Cicada Brood XIX, a periodical cicada, will emerge en masse in the southeast US. Their chorus of song overwhelms western-central NC.

They will emerge in April 2024, then again in 2037. This is a time capsule of sorts, to record who I was and what I was doing during that special 2024 event!

TO BE OPENED & READ APRIL 2037!

Name: _____

Age: _____

Grade: _____

How I Feel About Cicadas:

Glue a photo of yourself here

Here are my favorite things in 2024:

Color	Hobby	Animal
Book	Food	Thing About Myself

In 2037 (when Brood XIX emerges again) I will be _____ years old.

I will be living in _____,

working as _____,

and I will be great at _____
